

Foundations Of Perfectoid Spaces

This is likewise one of the factors by obtaining the soft documents of this foundations of perfectoid spaces by online. You might not require more become old to spend to go to the books inauguration as competently as search for them. In some cases, you likewise do not discover the pronouncement foundations of perfectoid spaces that you are looking for. It will certainly squander the time.

However below, following you visit this web page, it will be appropriately enormously easy to get as well as download lead foundations of perfectoid spaces

It will not say yes many times as we run by before. You can do it even if work something else at home and even in your workplace. for that reason easy! So, are you question? Just exercise just what we have the funds for under as competently as review foundations of perfectoid spaces what you taking into consideration to read!

Foundations of perfectoid spaces - School of Mathematics

In mathematics, perfectoid spaces are adic spaces of special kind, which occur in the study of problems of "mixed characteristic", such as local fields of characteristic zero which have residue fields of characteristic prime p . A perfectoid field is a complete topological field K whose topology is induced by a nondiscrete valuation of rank 1, such that the Frobenius endomorphism φ is surjective on K°/p where K° denotes the ring of power-bounded elements. Perfectoid spaces may be used to ...

Now an a noid perfectoid space is associated to a perfectoid a noid K -algebra, which is a pair $(R; R_+)$, where R is a perfectoid K -algebra, and $R_+ \subseteq R$ is open and integrally closed (and often $R_+ = R$). There is a natural way to form the tilt $(R[; R[+)$. To such a pair $(R; R_+)$, Huber, [18], associates a space $X = \text{Spa}(R; R_+)$ of equivalence classes of

Using Huber's formalism of adic spaces and Scholze's formalism of perfectoid spaces, we globalize the constructions to give several descriptions of the étale local systems on analytic spaces over p -adic fields. One of these descriptions uses a relative version of the Fargues-Fontaine curve.

Download PDF Abstract: We introduce a certain class of so-called perfectoid rings and spaces, which give a natural framework for Faltings' almost purity theorem, and for which there is a natural tilting operation which exchanges characteristic 0 and characteristic p . We deduce the weight-monodromy conjecture in certain cases by reduction to equal characteristic.

About Me: I am a postdoctoral scholar at UC Berkeley as part of the Research Training Group in Arithmetic Geometry. My mathematical research lives at the intersection of algebraic geometry and number theory, and centers around nonarchimedean and rigid analytic geometry, with a particular emphasis on establishing the geometric foundations of perfectoid spaces.

This makes many results accessible over fields such as $F_p((t))$, which are wide open over fields of arithmetic interest such as \mathbb{Q}_p . The theory of perfectoid spaces was initially designed as a means of transporting information available over $F_p((t))$ to \mathbb{Q}_p , but has since found a number

Perfectoid Spaces and their Applications

Since their introduction just two years ago, perfectoid spaces have played a crucial role in a number of striking advances in arithmetic algebraic geometry: the proof of Deligne's weight-monodromy conjecture for complete intersections in toric varieties; the development of p-adic Hodge theory for rigid analytic spaces; a p-adic analogue of Riemann's classification of abelian varieties over the complex numbers; and the construction of Galois representations for torsion classes in the ...
