~~Principles of Modern Operating Systems~~

Most of these principles were taken from the modern operating systems book mentioned above. Designing an Operating System starts with determining what it should do. This is why understanding the user interfaces at the beginning is important. It should have clear user interface paradigms, execution paradigms and data paradigms.

~~Principles of Modern Operating Systems by Jose Garrido~~

1. The operating system executes, and schedules an application (makes it run). 2. The chosen application runs: the CPU executes its (non-privileged) instructions, and the operating system is not involved at all. 3. The system clock interrupts the CPU, causing it to switch to the clock's interrupt handler, which is an operating system function. 4.
